Easily Control Your Lights

Product Overview

The **Wired 5-Button Switch** is a SimplySNAP component that can be installed anywhere you need indoor, wireless push-button lighting control, such as municipal ball parks, hockey arenas, basketball facilities, and other multi-use sports complexes.

The Wired 5-Button Switch switch easily connects to a SS420/450 site controller via the USB interface to make it easy to get manual access to site lighting controls.

This is ideal for an indoor application where the customer would like the option of controlling their lights by pressing a button rather than logging into SimplySNAP.

Features

- 5-button switch for easy control of all lights
- Allows for controlled manual access to a SimplySNAP lighting system
- Connects to Site Controller via USB Port
- Each of the buttons can be configured to control up to 5 scenes

Product #	Description
GLP-SW-USB-5B	Wired 5-Button Switch
